1. Reseña escrita

El modelado y la gestión eficiente de grandes volúmenes de datos se han vuelto cruciales en la era digital actual, pues a medida que las organizaciones generan y recolecta grandes cantidades de información, la capacidad para tratar, procesar y extraer valor de estos datos se ha convertido en una necesidad y en una ventaja competitiva clave para el mundo empresarial y el desarrollo de diversos sectores.

El modelado de datos permite estructurar y organizar la información de manera que sea fácilmente accesible y analizable, lo que facilita la identificación de patrones, tendencias, correlaciones y nuevos puntos de vista que pueden impulsar la toma de decisiones con información valiosa y también la innovación. Por otro lado, una gestión eficiente garantiza que los datos se almacenen, procesen y transmitan de manera segura y rentable preservando su integridad y seguridad, esto se traduce en una ventaja competitiva clave, permitiendo a las empresas mejorar sus operaciones, personalizar productos y servicios, y anticipar tendencias futuras.

Sin embargo, el manejo de Big Data también presenta desafíos importantes que se deben superar, como lo son la integración de datos heterogéneos, el procesamiento en tiempo real, la necesidad de infraestructura adecuada, la protección de la privacidad y la garantía de la calidad de los datos. Abordar estas dificultades es esencial y fundamental para aprovechar al máximo el potencial de los grandes volúmenes de datos en nuestra sociedad y aplicarlos de una manera adecuada en el día a día de las organizaciones.

En resumen, el modelado y la gestión eficiente de grandes volúmenes de datos son fundamentales para convertir datos brutos en información valiosa, facilitando la toma de decisiones informadas, impulsando la innovación y promoviendo el progreso en diversos sectores. Su importancia radica en su capacidad para transformar la manera en que las empresas operan, investigan y evolucionan en un mundo cada vez más interesado en la información y con una dependencia creciente hacia el Big Data.

Configuración del ambiente de Google Colaboratory con Pyspark y Hadoop

```
# Download Java
!apt-get install openjdk-8-jdk-headless -qq > /dev/null
# Next, we will install Apache Spark 3.0.1 with Hadoop 2.7 from here.
!wget https://archive.apache.org/dist/spark/spark-3.5.1/spark-3.5.1-bin-hadoop3.tgz
# Now, we just need to unzip that folder.
!tar xf spark-3.5.1-bin-hadoop3.tgz

# Setting JVM and Spark path variables
import os
os.environ["JAVA_HOME"] = "/usr/lib/jvm/java-8-openjdk-amd64"
os.environ["SPARK_HOME"] = "/content/spark-3.5.1-bin-hadoop3"

# Installing required packages
!pip install pyspark==3.5.1
!pip install findspark
```

Importamos librerías

```
import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
import seaborn as sns
import os
import plotly.express as px
import plotly.io as pio

import findspark
findspark.init()

from pyspark import SparkContext
from pyspark.sql import Window
from pyspark.sql import SparkSession
from pyspark.sql.types import DoubleType, IntegerType, DateType
from pyspark.sql import functions as fct
from pyspark.ml import Pipeline
from pyspark.sql import SQLContext
from pyspark.sql.functions import mean,col,split,regexp_extract,when,lit,sum,desc,to_date,expr,round,avg,max,count,regexp_replace, trim
from pyspark.ml.feature import StringIndexer, VectorAssembler
from pyspark.ml.evaluation import MulticlassClassificationEvaluator
from pyspark.ml.feature import QuantileDiscretizer
```

Creamos la sesión de Spark

```
13s [3] SpSession = SparkSession \
    .builder \
    .appName("Airbnb Spark") \
    .getOrCreate()

0s [4] SpContext = SpSession.sparkContext
```

Importamos los datos y los visualizamos

```
df1 = SpSession.read.csv('/content/airnb.csv', header=True, sep=",")
df1.show(5)

df2 = SpSession.read.csv('/content/airnb_desert.csv', header=True, sep=",")
df2.show(5)

df3 = SpSession.read.csv('/content/airnb_luxe.csv', header=True, sep=",")
df3.show(5)
```
